Version: October 14, 2026

FAC Metabase Dashboards User Guide

This guide explains how to use the Federal Audit Clearinghouse (FAC) Metabase dashboards. These dashboards allow users to explore audit submissions, federal award expenditures, audit findings, and more. Most dashboards include filters, tables, and/or visualizations to help you analyze audit data and export results for further use.

Using Dashboard Filters and Search

Different types of dashboard filters use different input mechanisms. Depending on whether the filter is a dropdown, input box, or search box, you may need to select "Apply," select "Update filter," or press "Enter/Return" after entering your criteria. When filtering by state, use the two-letter state abbreviation in uppercase.

Text-search dashboards support one or more search terms. When multiple terms are entered, results contain all selected words, although the words may appear in any order or in different parts of the text.

Troubleshooting

If a dashboard displays an error message, make sure you have entered data into any required filters and selected the applicable "Apply" or "Update filter" button, as applicable. If all required filters are applied, try refreshing the page.

Some search filters contain default values to speed up loading times. Sometimes these default values can cause a search to become stale. If the dashboard shows an error, try refreshing the page or removing the default value and typing in the value by hand.

If the error persists, submit a ticket to the FAC helpdesk.

Dashboard Organization

The FAC's Metabase offerings are as follows:

• Data Explorer (Browse General) - Enables filtering and exploration of audit submissions by key attributes such as year, entity type, state, and oversight.

• Data Crosswalk – Connects UEIs, EINs, additional identifiers, historical entity names, auditor EINs, and older GSA_MIGRATION records.

• Findings (Browse Findings) - Enables filtering and analysis of audit findings by type, severity, and repeat occurrence.

• Repeat Findings – Reconstructs repeat-finding history across audit years.

• Passthrough Recipient and Subrecipient Findings – Compares findings associated with indirect awards and subrecipient activity by state.

• Text Search – Searches narrative fields such as finding text, corrective action plans, SEFA notes, accounting policies, and de minimis rate explanations.

• Oversight Summaries – Summarizes activity by oversight and cognizant agencies.

• Yearly Trends – Displays audit activity and trends over time.

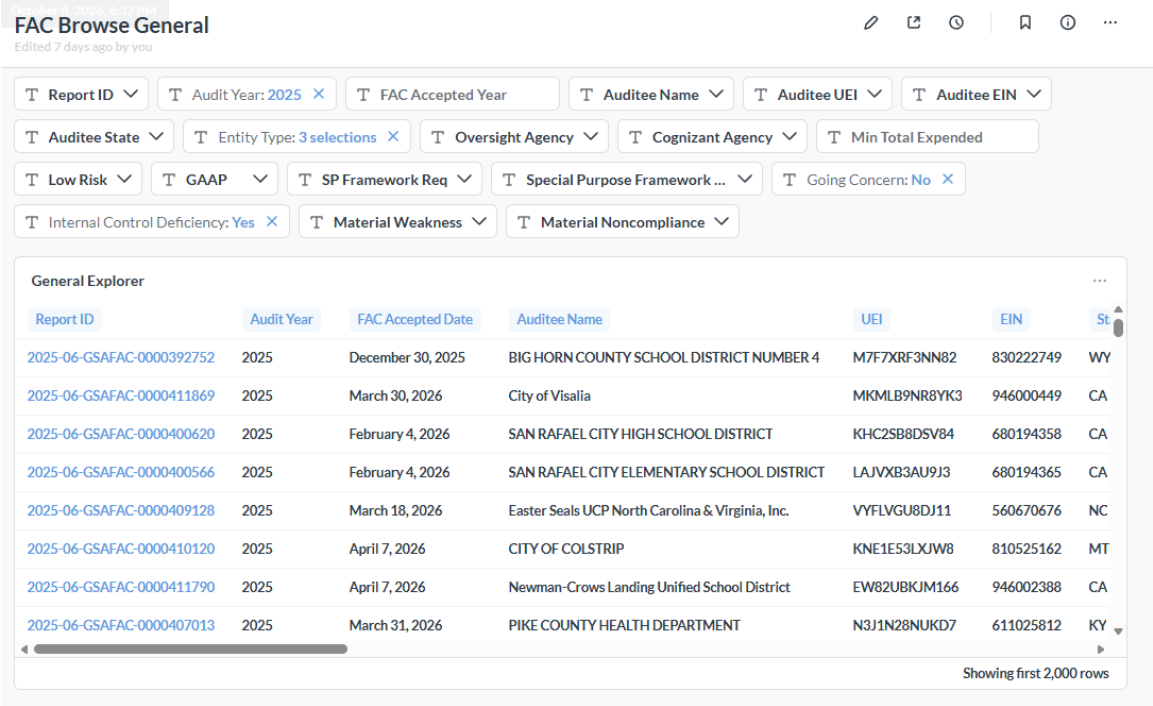

• State Graphs – Shows geographic patterns in submissions, findings, and federal expenditures.

Dashboard Descriptions

Data Explorer (Browse General)

The Data Explorer (Browse General) dashboard provides a report-level view of FAC submissions and allows users to search and filter audits using general submission characteristics. Filters include Report ID, Audit Year, FAC Accepted Year, Auditee Name, UEI, EIN, State, Entity Type, Oversight Agency, Cognizant Agency, minimum federal expenditures, Low-Risk Auditee status, accounting framework indicators, Going Concern, Internal Control Deficiency, Material Weakness, and Material Noncompliance.

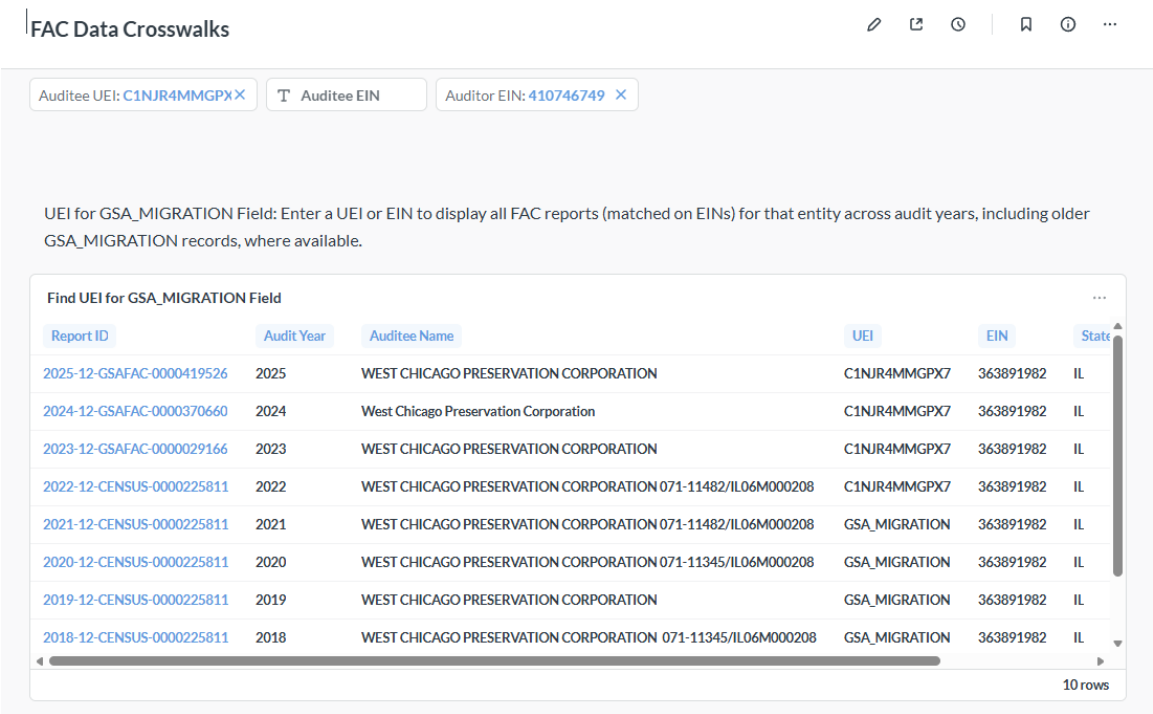

This dashboard is especially useful for researching a specific auditee or identifying groups of submissions that share common characteristics. Report IDs are linked to the FAC dissemination record for additional detail.

Results include the following columns: Report ID, Audit Year, FAC Accepted Date, Auditee Name, UEI, EIN, State, Auditor Firm, Entity Type, Cognizant Agency, Oversight Agency, Total Federal Expenditures, Low Risk Auditee, GAAP, Special Purpose Framework Required, Special Purpose Framework, Going Concern, Internal Control Deficiency, Material Weakness Disclosed, and Material Noncompliance Disclosed.

Data Crosswalks

The Data Crosswalks dashboard helps users connect auditee and auditor identifiers across FAC records and audit years. It is especially useful for researching entities whose identifiers or names have changed over time, locating older records that contain GSA_MIGRATION in place of a UEI, identifying additional Auditee UEIs or Auditee EINs reported on a submission, and reviewing the history associated with an auditor EIN.

Users can search by Auditee UEI, Auditee EIN, or Auditor EIN. The dashboard includes several crosswalk views:

- UEI/EIN to All FAC Reports – Enter an auditee UEI or EIN to locate all FAC reports associated with that entity across audit years. When possible, the search uses EIN relationships to connect older GSA_MIGRATION records with later submissions containing a valid UEI. Results include: Report ID, Audit Year, Auditee Name, UEI, EIN, State, and FAC Accepted Date.

- Historical EIN/UEI/Name Relationships – Displays the UEIs historically associated with an EIN, including the first and most recent audit years in which each relationship appears. This can help identify identifier changes over time. Results include: EIN, UEI, Auditee Name, First Audit Year, and Most Recent Audit Year.

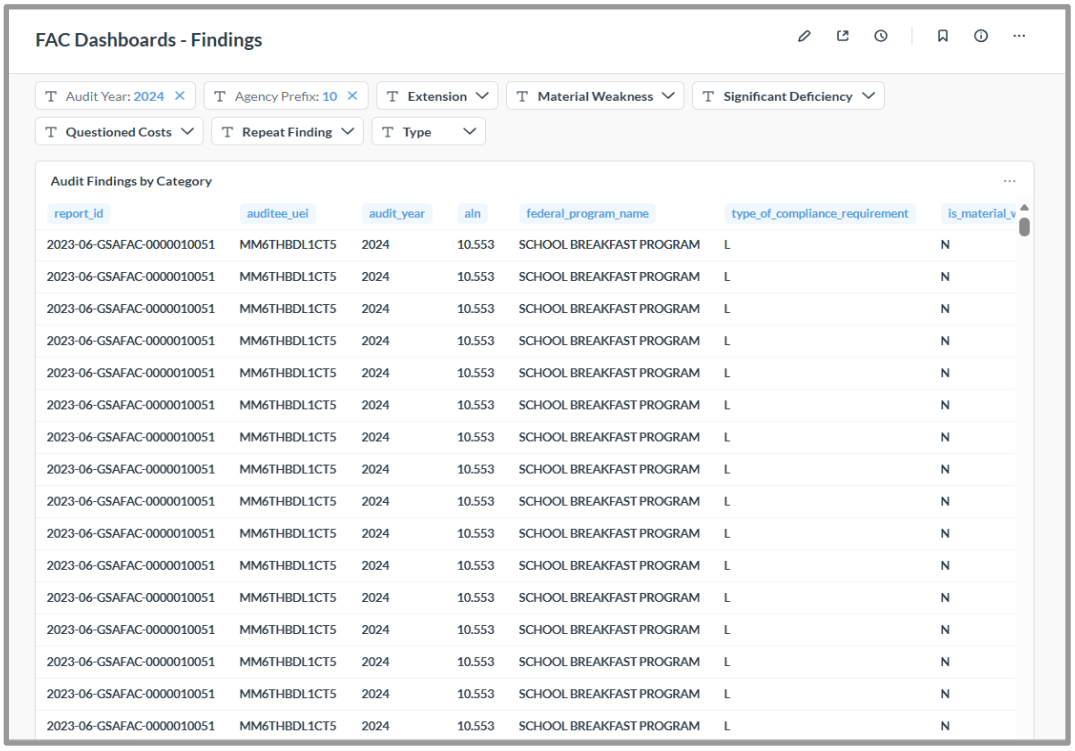

- Primary and Additional Identifier Lookup – Identifies FAC reports where the searched UEI or EIN appears either as the primary auditee identifier or as an additional identifier reported on the submission. Results indicate whether the identifier matched a primary or additional field. Results include: Identifier Type, Match Type, Report ID, Audit Year, Auditee Name, Primary UEI on Submission, Primary EIN on Submission, Matched Additional UEI, Matched Additional EIN, and State.

- Auditor EIN Crosswalk – Enter an Auditor EIN to view auditor firm names associated with that EIN across FAC audit years. The results show the first and most recent audit year, report count, and whether a firm name represents the most recent name associated with that EIN. Capitalization-only differences are combined.

Results include: Auditor EIN, Auditor Firm Name, First Audit Year, Most Recent Audit Year, Report Count, and Most Recent Name.

Findings (Browse Findings)

The Findings dashboard displays audit findings categorized by type, such as material weaknesses, significant deficiencies, and questioned costs. Use the filters to refine your results.

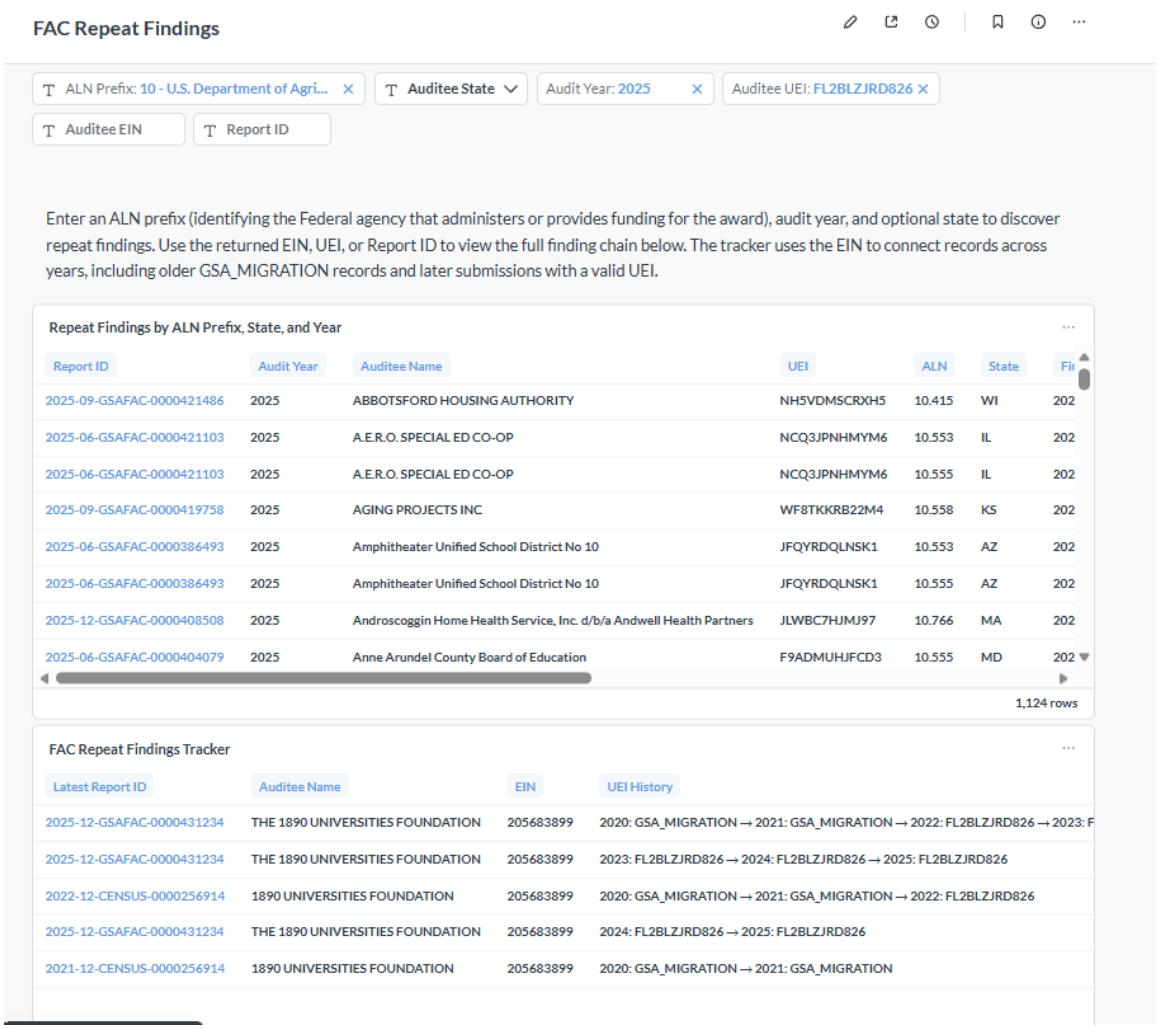

This view allows users to:

- Identify trends in audit findings
- Review detailed finding descriptions
- Filter findings by year and category
- Export data for reporting and analysis

Results include: Report ID, Audit Year, FAC Accepted Date, Auditee Name, UEI, EIN, State, Auditor Firm, Auditor EIN, Auditor Email, ALN, Program Name, Cluster Name, Entity Type, Oversight Agency, Cognizant Agency, Total Federal Expenditures, Total Findings Count, Award Reference, Finding Reference, Compliance Requirement, Material Weakness, Major Program, Significant Deficiency, Questioned Costs, Repeat Finding, Prior Finding Reference Numbers, Modified Opinion, Other Findings, Other Matters, Agencies with Prior Findings, Direct Award, Has Subrecipient, Indirect Funding ID, Indirect Funding Name, and Loan.

Repeat Findings

The Repeat Findings page contains two dashboards that work together: Repeat Findings by ALN Prefix, State, and Year for discovering repeat findings, and the FAC Repeat Findings Tracker for reconstructing historical finding chains across audit years.

Repeat Findings by ALN Prefix, State, and Year

Use this dashboard to discover repeat findings for a selected ALN prefix, audit year, and optional state. The ALN prefix identifies the Federal agency that administers or provides funding for the award. Results include: Report ID, Audit Year, Auditee Name, UEI, EIN, ALN, State, Finding Reference, Compliance Requirement, Cognizant Agency, and Oversight Agency. Use the returned Report ID, UEI, or EIN to investigate the complete repeat finding history in the tracker below.

FAC Repeat Findings Tracker

Use this dashboard to reconstruct the historical chain of repeat findings for a specific entity or report. Search by Report ID, Auditee UEI, or Auditee EIN. The tracker uses EIN as the bridge across audit years so that older records containing GSA_MIGRATION can be connected to later submissions containing a valid UEI.

The tracker displays the latest report, auditee name, EIN, UEI history, finding-reference chain, report history, first and latest located audit years, responsible agency and agency role, and whether a referenced prior finding appears to be missing from the available FAC data. Results include: Auditee Name, EIN, UEI History, Agency, Agency Role, Finding Chain, Chain Status, Missing Prior Finding, First Located Audit Year, Latest Audit Year, Years Located in Chain, Latest Finding Reference, Latest Report ID, and Finding and Report History.

Note: Prior finding references are used to reconstruct the chain across audit years. A missing prior finding may indicate that the referenced record is not available in the FAC data or that the historical chain cannot be fully resolved.

Pass-Through Recipient and Subrecipient Findings

This dashboard compares two related but distinct concepts: pass-through recipient activity, where the auditee received a federal award indirectly through another entity (is_direct = No), and subrecipient activity, where the auditee passed federal funds onward to a subrecipient (is_passthrough_award = Yes). Users can filter by audit year, agency prefix, and ALN extension.

The dashboard includes:

- Separate state maps for pass-through recipient findings and subrecipient findings.
- Interactive state selection that populates the corresponding detailed findings table.
- Finding-level details including Report ID, auditee information, ALN, finding reference, compliance requirement, and finding indicators.
- Audit year, agency prefix, and ALN extension filters to focus on selected programs or periods.

Each map shows the percentage of findings associated with audit reports containing the selected type of award activity relative to all findings in that state. A higher percentage does not necessarily mean a higher number of findings overall.

Results include: Report ID, Audit Year, Auditee Name, UEI, EIN, State, ALN, Finding Reference, Compliance Requirement, Material Weakness, Significant Deficiency, Questioned Costs, and Repeat Finding.

Note: FAC findings are reported at the audit-report level. These measures indicate that the report contains the relevant award activity; they do not establish that a specific finding is tied to a specific award.

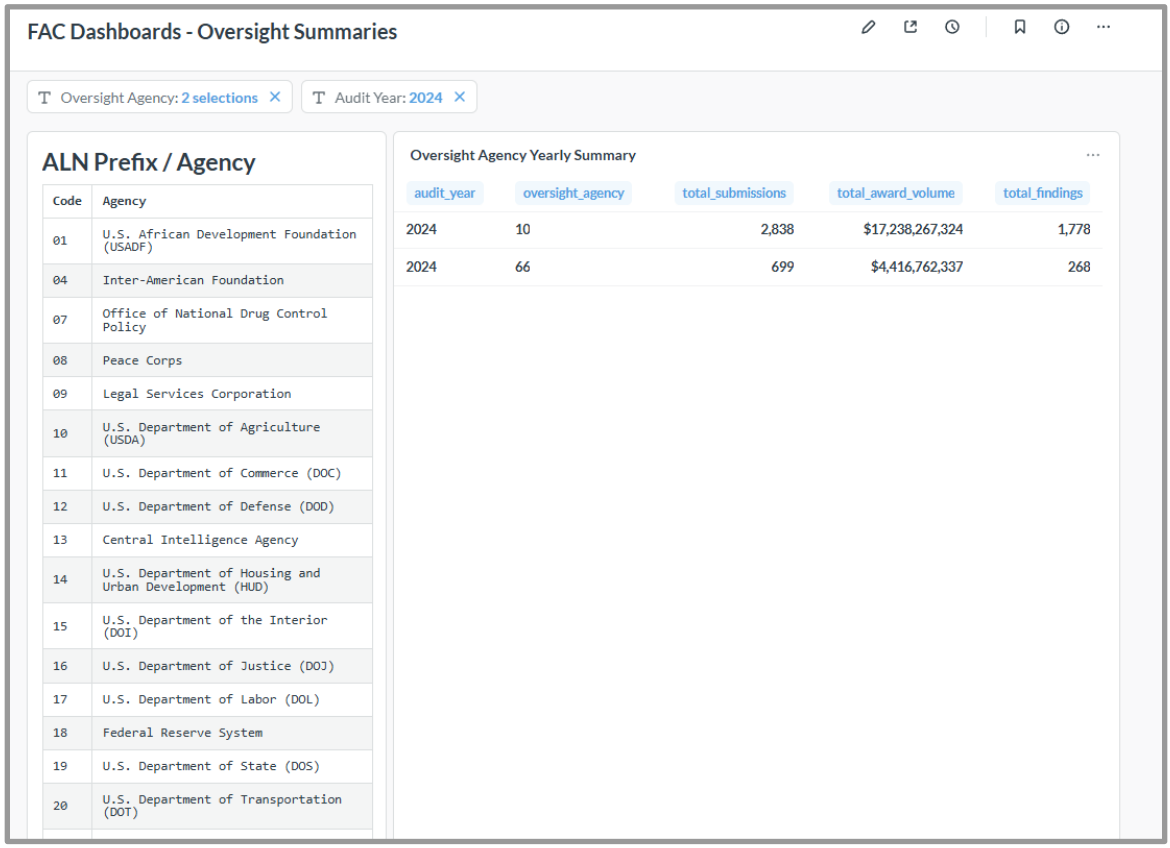

Text Search

The Text Search dashboard searches narrative information that is difficult to analyze with standard categorical filters. Separate cards search Findings Text, Corrective Action Plans (CAPs), SEFA Note Content, Accounting Policies, and De Minimis Rate Explanations.

Enter one or more search terms in the appropriate text filter. When multiple words are entered, results return only records containing all selected words; the words do not need to be adjacent or appear in the same order. Additional filters such as audit year, auditee name, UEI, EIN, state, and compliance requirement can further narrow results. Results include: Report ID, Audit Year, Auditee Name, UEI, EIN, State, Finding Reference, Compliance Requirement, and the narrative text (such as the Finding, the CAP, the SEFA Note, etc.).

Oversight Summaries

The Oversight Summaries dashboard provides a summary of audit submissions and award volume for selected Cognizant and Oversight agencies. Use the filters at the top to select one or more agencies and audit years.

This dashboard includes:

- A list of oversight agencies and their codes.
- Summary statistics including total submissions, award volume, and findings.
- A comparison view when multiple agencies are selected.
- A key on the left-hand side showing agency codes with their corresponding names.

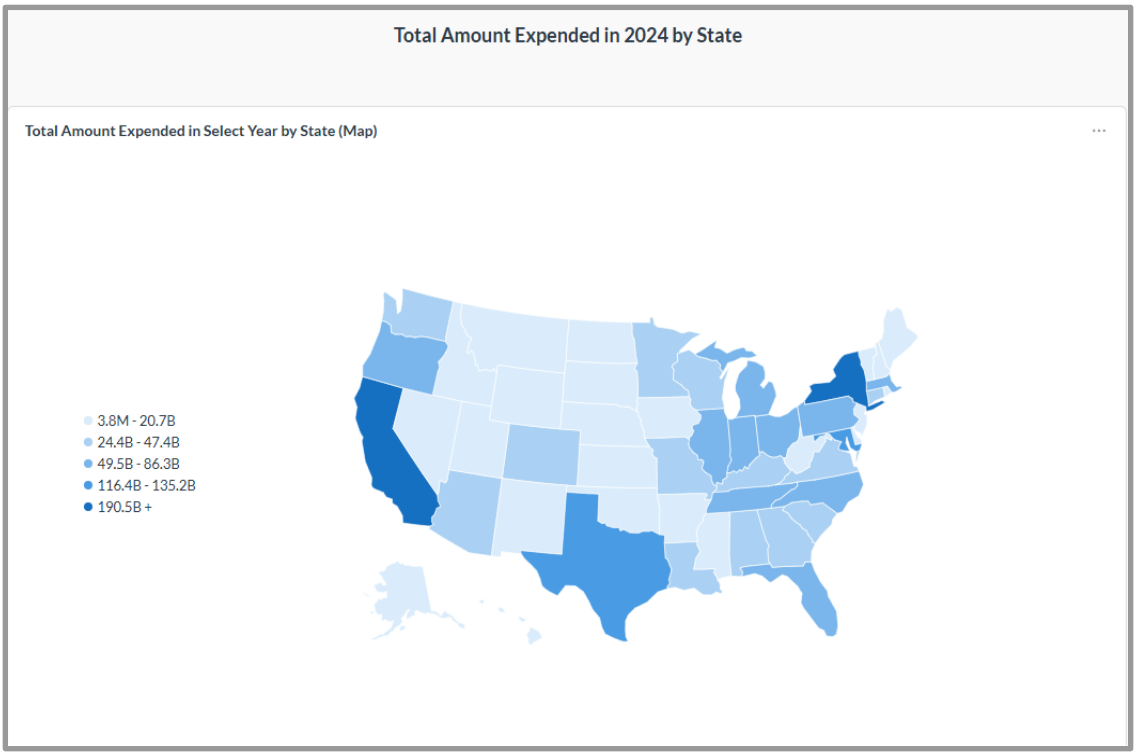

Results include: Audit Year, Agency Type, Agency, Total Submissions, Total Award Volume, and Total Findings.

Yearly Trends

The Yearly Trends dashboard offers various graphs to plot yearly data and trends: total submissions, total dollars in federal awards, and findings count (including a count of audits each year that reported zero findings).

State Graphs

The State Graphs dashboard provides several geographic views of FAC data by state. Users can explore federal expenditures, findings rates, and low-risk auditee rates for a selected audit year. Interactive state selections can also be used to display more detailed information for an individual state.

These views help users compare geographic patterns in federal award expenditures and audit characteristics across states.

Customizing and Working with Results

Export Data

To export data from any dashboard:

1. Hover over a table or visualization.
2. Click the three dots (⋯) in the top-right corner.
3. Select 'Download results.'
4. Choose your preferred file format (CSV, Excel, etc.). Choosing ".png" format (only available for graphs/charts) will download the graphic itself, not the table data.

Filter and Visualize Data

You can adjust how dashboard results are displayed and interact with them while you work:

- **Resize columns:** Drag a column boundary to make a column wider or narrower.
- **Sort results:** Select a column heading to sort the table in ascending or descending order. A sort indicator appears next to the active column.
- **Scroll horizontally:** Wide tables may contain additional columns that are not visible at first. Use the horizontal scroll bar at the bottom of the table to view them.
- **Clear filters:** Select the **X** on an active filter to remove that filter value.
- **Change filter selections:** Update dashboard filters at any time to narrow or broaden the results shown.
- **Use multiple filters together:** Combining filters can help narrow large result sets to the records most relevant to your research.
- **Open linked records:** Where Report IDs or other values appear as links, select them to open the related FAC record or detail page.
- **Use browser zoom if needed:** If a table is difficult to read or too wide for the screen, browser zoom controls can help fit more or less information on the page.
- **Refresh stale results:** If a dashboard does not appear to reflect a changed filter, refresh the page or clear and re-enter the filter value.

User Queries

How can I track repeat findings?
Use the Repeat Findings dashboard. First use the discovery filters (ALN prefix, audit year, and optional state) to identify repeat findings. Then enter a Report ID, UEI, or EIN in the tracker to reconstruct the finding chain across audit years. EIN is used to bridge older GSA_MIGRATION records to later records with a valid UEI.

How can I see findings tied to questioned costs?
Use the Findings dashboard and set *Questioned Costs = Yes*. This allows you to isolate findings that include financial impacts and review them in detail.

How can I analyze audit activity for a specific state?
Use the Data Explorer (Browse General). Apply the *State* filter to narrow results and compare funding levels or submission counts within that state. Additionally, you can use the State Graphs dashboards.

How can I research a specific entity, UEI, or EIN?
Use the Data Explorer (Browse General) dashboard to find general audit details of all FAC reports associated with a UEI or EIN. Use the Crosswalks dashboard to review historical UEI/EIN relationships, entity-name changes, and additional identifiers.

How can I explore trends over time?
Use the Yearly Trends dashboard. Adjust the audit year filter to compare submission counts, award volume, and findings across years.

How can I review findings by category (e.g., material weaknesses, significant deficiencies)?
Use the Findings dashboard and apply filters such as *Material Weakness = Yes* or *Significant Deficiency = Yes* to focus on specific finding types.

How can I compare pass-through recipient and subrecipient findings by state?
Use the Pass-Through Recipient and Subrecipient Findings dashboard. Separate maps show the percentage of findings associated with reports containing indirect awards and reports containing subrecipient activity. Click a state to populate the corresponding detail table.

How can I find findings associated with a specific federal program?
Use the Findings dashboard. Filter by ALN, agency prefix, or ALN extension to identify findings associated with a particular federal program.

How can I analyze a specific federal program (ALN)?
Use Findings dashboard to search by ALN or by agency prefix and extension. Results include program, auditee, finding, and auditor information.

How can I search narrative text across FAC submissions?

Use the FAC Text Search dashboard. Choose the appropriate text field (Findings Text, CAP, SEFA Notes, Accounting Policies, or De Minimis Rate Explanation) and enter one or more terms. Multiple terms return only records containing all selected words.

How can I review historical identifiers, including GSA_MIGRATION records?

Use the Crosswalks dashboard. Searching by UEI or EIN can surface all associated reports and historical identifier relationships, including older records where the UEI is GSA_MIGRATION.
